

Darren Tang

San Francisco, CA | 408-677-1484 | tang.darren@gmail.com | [linkedin.com/in/tang-darren](https://www.linkedin.com/in/tang-darren)

Software Engineer | AI Agent Engineer | Full-Stack Engineer

EDUCATION

Santa Clara University <i>Master of Science in Computer Science and Engineering</i> Relevant Coursework: Advanced Algorithms, Advanced Operating Systems, Data Mining, Object-Oriented Programming	Santa Clara, CA September 2025 - June 2027
University of Wisconsin-Madison <i>Bachelor of Science in Computer Science</i> Honors: Lumen Scholarship Fund Scholar, \$40,000 merit-based scholarship; Dean's List, Spring 2024	Madison, WI September 2021 - May 2025

WORK EXPERIENCE

AI Agent Development Intern <i>Veracyte</i> - Developed and validated an application through functional testing with Customer Care representatives that applies decision tree logic to flag workflow and quality control issues and targets a 30% reduction in manual review time. - Building a background AI assistant with Claude Code, OpenAI Codex, and MCP integrations to summarize order context and automate repetitive Customer Care steps, targeting a 25% increase in case-handling throughput. - Collaborating in an Agile Scrum environment to develop and validate Salesforce (CRM) to TRAF field automation, targeting a 40% reduction in form preparation time while reducing duplicate entry and transcription errors.	June 2026 - Present South San Francisco, CA
AI Analyst <i>DataAnnotation</i> - Developed containerized LLM workflows with Docker and Kubernetes, refining prompts, API calls, JSON schemas, and evaluation rubrics for code-generation and automation tasks. - Evaluated more than 50 model outputs for factuality, relevance, reasoning quality, and instruction adherence in RLHF and fine-tuning pipelines. - Ran A/B tests across models, MCP tools, and prompts to improve AI accuracy, tool use, and task completion.	January 2026 - May 2026 Fremont, CA
Software Engineer Intern <i>Sonic Engineering</i> - Refined software workflows for CNC inventory management through iterative prototyping, improving tool lookup, material tracking, and tool-life monitoring. - Implemented a Java-based inventory service through Azure DevOps CI/CD that used SQL records and Java data structures to evaluate reorder thresholds and reduce delayed reorders by 50%. - Collaborated cross-functionally with engineers and CNC operators across the Software Development Life Cycle (SDLC) to translate product requirements into software features, validate workflows, and refine designs for manufacturing constraints.	May 2025 - August 2025 Union City, CA

PROJECTS

SafeCall <i>WebSpatial VR by ByteDance, Spring Boot, RESTful Web Services</i> - Built an interactive WebSpatial VR training platform that translated emergency response procedures into guided headset scenarios for first responders at SCU Hackathon for Humanity 2026. - Implemented RESTful Web Services with Spring Boot that managed emergency scenario progression and responder actions and used Test-Driven Development to validate workflow logic through unit testing and integration testing.	March 2026
ExpenSense <i>AI Agent, OpenAI, OCR, Firebase, Firestore</i> - Built a multi-agent reimbursement platform that used OpenAI and OCR to validate receipts, automate approvals, route exceptions, and persist expense and audit records in Firebase Firestore. - Red-teamed 29 cases covering prompt injection, RBAC bypass, data poisoning, hallucinations, and unsafe tool use.	December 2025

SKILLS

Languages: Java, Python, C, TypeScript, JavaScript, Structured Query Language (SQL), Flutter, HTML, CSS
Technologies: React, Spring Boot, Next.js, Node.js, FastAPI, PostgreSQL, REST APIs, JUnit, pandas, NumPy
Tools and Platforms: Azure DevOps, CRM, Docker, Firebase Firestore, Vite, Git/GitHub, AWS, CI/CD, Agile
AI and Machine Learning: PyTorch, Cursor, Codex, Claude Code, OpenAI, Anthropic, MCP, TensorFlow, RAG
